**Company** iTELLIGENT Solutions develops and markets integrated hardware and software for an interactive, web-based service that integrates and manages attendance ie: identification, location, hours, area, safety and security information for people, equipment and properties. The flagship product is iVerified™ software operating in windows .net with integrated RFID functions.

Using easy- to- use, secure web based system of RFID tags, identification badges, RFID readers, PDAs, wired or wireless networks and a Global Positioning System (GPS), subscribers can create class/training/areas, authorize, verify, report, and audit any badge holder regarding who they are, where they are, and when they arrived or departed. Markets include any business with sales teams, service teams, licensure tracking, certification verification, fleet vehicles, correctional facilities, fire departments as well as students and educational/ court facilities. Product features include:

- Web-based location information system using intelligent identification credentials, customer derived location/class/area schedules to enroll applicants, secure readers to track attendance, a Global Position System (GPS) to track and report on fleet status, including persons, equipment, vehicles, parts inventory and automate the status/inventory/delivery and attendance functions via any internet enabled device.
- Web-based identification management workflow solution that provides an easy-to-use, intuitive format to create, manage, authorize and verify the physical and logistical securities of people, students, visitors, locations, areas, equipment, fleets, etc. and their access rights to physical locations and logical locations.
- ICES, incident command emergency system – A web-browser knowledge base of the civil preparedness, emergency response procedures and facility infrastructure information, complete with a customized visual tour of a client’s site, and the procedural guidelines a facility needs to comply with government mandates for evacuation, chemical response. Emergency site roster (roll call) of responders and building occupants detailing exact time of arrival/departure with vital information delivered via wireless network.
- iVerified for Offender Management is a simple add on or stand alone module that leverages your existing CJIS systems through a web based interface to identify and track the location of your population. Automating headcounts, activity logs, streamlining operations and increasing labor utilization this easy to afford, easy to set up and even easier to use system saves endless hours of handwriting or data entry. Because it is a web based system, there is no complicated hardware or software to learn
- iVerified for Evidence and Property Management tracks evidence movement from collection to receiving, from lab & court until release or destruction. Know who, what, where and when all evidence and property is with a single click. Using Psion Workabout Pro handheld RFID reader provides fast, secure and tamperproof collection, storage, movement, release or destruction with verified documentation. iVerified’s Bandit RFID tag is secure, tamperproof and rugged allowing for complete “read” of contents without opening the bag. A solid “chain of custody” history using RFID assures proper evidence collection and preservation procedures are followed for evidence traceability.
